

The screenshot shows the 'Add Service Reference' dialog box in Visual Studio. The 'Address' field contains the URL 'http://localhost:9081/WebServiceSimpleServer/TestWebService?WSDL'. The 'Services' and 'Operations' sections are empty. The 'Namespace' field is set to 'MyServiceReference'. The 'Advanced...' button is highlighted with a red box.

<http://localhost:9081/WebServiceSimpleServer/TestWebService?WSDL>

<http://localhost:9081/WebServiceSimpleServer/TestWebService?Tester>

TestWebService Web Service Tester

This form will allow you to test your web service implementation ([WSDL File](#))

To invoke an operation, fill the method parameter(s) input boxes and click on the button labeled with the method name.

Methods :

```
public abstract java.lang.String tests.TestWebService.correctName(java.lang.String)
```

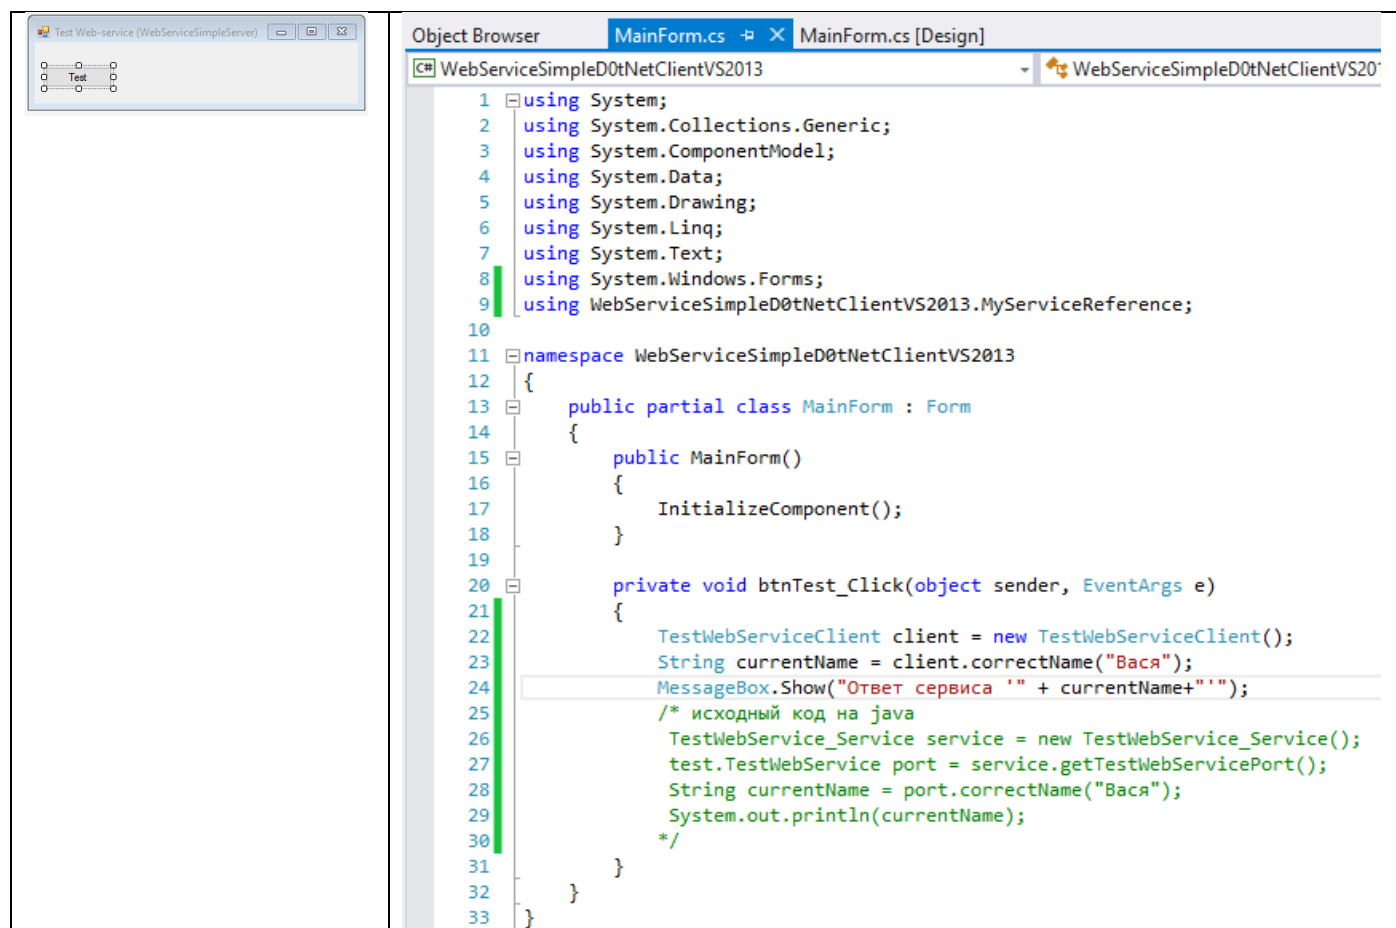

correctName

<http://localhost:9081/WebServiceSimpleServer/TestWebService?WSDL>

```
<?xml version="1.0" encoding="UTF-8"?>

        </xsd:schema>
      </types>
    - <message name="correctName">
```

The screenshot displays the Visual Studio IDE with the following components:

- Top Bar:** Shows the current file is 'MainForm.cs' in the 'Design' view. The 'Reference.cs' file is also visible in the background.
- Left Panel (Solution Explorer):** Displays the project structure for 'WebServiceSimpleD0nNetClientVS2013'. It includes a 'References' folder with various system assemblies (e.g., Microsoft.CSharp, System, System.Core, System.Data, System.Deployment, System.Drawing, System.Runtime.Serialization, System.ServiceModel, System.Windows.Forms, System.Xml, System.Xml.Linq) and a 'MainForm' folder containing 'Program'.
- Right Panel (Code Window):** Shows the implementation of the 'TestWebServiceClient' class. The class inherits from 'ClientBase<TestWebService>'. The code includes a constructor, a 'CorrectNameRequest' method, and a 'CorrectNameResponse' property.
